Project Experience

EWI

- **Description:** This project is an oneline training system. Instructor can create courses and assign to students. Students get the course link by email. They can study the course by opening the link in the browser. There are many types of course. One of the types is project type. It will create a virtual machine in the Microsoft Azure. This virtual machine wa created by a customize image which has a industry software in it. Students can remote this VM by web browser. They can finish the practise in it. The system will keep the practise result. Both Instructor and Student can check it.
- **Responsibilities:**
 - Travel to CA, USA for working with clients.
 - Communicate with clients and offshore team.
 - Develop functional part with React.

- Finish user stories in each sprint.
- Help team members to solve some problems.
- Train team members to improve their technical skills.
- Report to Program Manager and other stakeholders.

CEP

- **Description:** This project is to create VMs in the Microsoft Azure. We use image/snapshot to create VM. Image/snapshot will contain Enterprise Industry Software. VMs can be connected by RDP file or Thinfinity. It's convenient to create and terminate VMs for training purpose.
- **Responsibilities:**
 - Travel to CA, USA for working with clients.
 - Communicate with clients and offshore team.
 - Develop functional part with React.
 - Finish user stories in each sprint.
 - Help team members to solve some problems.
 - Train team members to improve their technical skills.

Wonderware System Platform

- **Description:** This project is to deliver a product that enables the building and operation of composite visualization systems supporting digital natives. The end users can use the product to create and configure a plant model in their control room computers. The product is an evolution of WSP that is an existing product of Schneider. People will upgrade to this from WSP.
- **Responsibilities:**
 - Traveled to CA, USA two times for working with clients. Stayed there for one month each time.
 - Communicate with client and offshore team.
 - Help offshore team to figure out the clients' requirement.
 - Develop functional part with C#/WPF.
 - Implement unit test to achieve cover rate.
 - Implement automatic test functions and test cases.
